

'The Turntable's Choice' Phonostage

As analog fans with large LP collections, the development of this phonostage was an assignment close to our hearts. Because we prefer MC cartridges, we set out to develop the ultimate moving-coil

preamplifier. 'The Turntable's Choice' inspires with its dynamic agility, precisely tracking bass lines and a vocal range that is filled with emotive tone, body and a powerful projective force, all perfectly

balanced by a harmoniously effulgent treble. Soundstaging and image specificity are unbelievably holographic and fleshed out.

- Gain of 68dB (2500x)
- S/N ratio typically 76dB
- THD \leftarrow 0.03%
- Star-grounding (the stereo version too uses discrete dual-mono floating power supplies)
- passive RIAA equalization

- Adjustable impedance loading
- Discrete architecture (24 monolithic transistors per channel)
- High-current output stage with low 50-ohm output impedance
- Output voltage \rightarrow 5V, balanced 10V

- External power supply (the fully balanced version has twin power supplies)
- Resonance-free vibration-optimized chassis
- Dual-mono architecture, available fully balanced or single-ended
